Notice

Names and Trademarks

All company names, organization names, license names, and product names mentioned in this documentation are used for identification purposes only. A trademark is explicitly identified as registered or unregistered trademark only if required by appropriate guidelines or license terms.

Warranty and Liability

The covered open source software is used or made available WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. The individual licenses may contain more details with respect to limitation of warranty or liability.

The individual open source warranty or liability disclaimers indemnify the original authors of the individual components. Warranties and liabilities declared on the offering by metaeffekt GmbH are subject to additional terms of use and are not affected (neither reduced nor extended) by the individual disclaimers of the used open source components.

Availability of Source Code

This software distribution annex covers the corresponding source code of the used open source components.

In case you regard the provision of source code to be inaccurate or incomplete please address your source code request to your point of contact for the given software distribution

Please note, that metaeffekt GmbH is only obliged to make source code available in case the effective license demands such provisioning within a given period of time after you obtaining the software.

This documentation is protected by copyright 2025, metaeffekt GmbH.

1 SampleProduct 1.0.0

The *software distribution* covered by this document contains *components* and *subcomponents* restricted by individual license terms.

This document is part of the *software distribution annex* which addresses the obligations deduced from the *effective licenses*. The software distribution is made available or transferred only in corresponding combination with the software distribution annex.

The component licenses and notice files are provided as part of the software distribution annex. Individual license texts may be omitted in case the terms are restricting the distribution.

License obligations of the individual components, as far as these can be addressed in documentation, are detailed in section .

1.1 Sample Product Asset List

The following table lists all assets that have been identified in the context of Sample Product. The assets are listed in separate sections with their specific characteristics and attributes.

Unknown Asset Type - A

Attributes	Values
Type	
Name	A
Version	1.0
Checksum (MD5)	
Hash (SHA-256)	

Unknown Asset Type - B

Attributes	Values
Type	
Name	B
Version	2.0
Checksum (MD5)	
Hash (SHA-256)	

Unknown Asset Type - C

Attributes	Values
Type	
Name	C
Version	3.0

1.2 Sample Product Asset Licenses

Table Asset Licenses provides an overview of all licenses and license expressions associated with the software assets covered by this documentation.

Please note, that a license / license expression may be associated with several assets.

Licenses	SPDX Id	OSI Status	Open CoDE Approval	Count
Apache License 2.0	Apache-2.0	approved		3
BSD 3-Clause License [1]	BSD-3-Clause	approved[1]		1
BSD alike				1
BSD Zero Clause License	0BSD	approved		1
MIT License	MIT	approved		2
Mozilla Public License 2.0	MPL-2.0	approved		1
Public Domain				2

Table 1: Asset Licenses (Sample Product)

Apache License 2.0

The following table lists all assets that are licensed under Apache License 2.0. Information with respect to the license or contract can be found in Apache License 2.0 [external]

Type	Name / Repository	Version / Tag
Appliance	A	1.0
Appliance	B	2.0
Appliance	C	3.0

BSD 3-Clause License

BSD 3-Clause License is representative of all licenses with variations,characteristics and modifications of the original license or license template. In this chapter, all variations, which are represented by BSD 3-Clause License, are listed individually.

Licenses	SPDX Id	OSI Status	Open CoDE Approval	Count
BSD 3-Clause License	BSD-3-Clause	approved		1

Table 2: License variations (Sample Product)

BSD 3-Clause License

The following table lists all assets that are licensed under BSD 3-Clause License. Information with respect to the license or contract can be found in BSD 3-Clause License [external]

1 License variations of the same kind are displayed as single license. The variations are detailed in the corresponding paragraphs. An approval or license status may only be applicable for individual variants.
2 Open CoDE allows a derivative approval in cases of license similarity. See https://opencode.de/en/knowledge/general-conditions/standardised-open-source-licenses Notes on license similarity, item LÄ.4.
3 This OpenCoDe approval represents the approval of multiple single licenses, which are represented under a single license term. The OpenCoDE approval for each single license is listed in the detailed overview of the linked license in this row.

2 SampleProduct 1.0.0

The *Software Distribution* covered by this document contains *Component* and *Subcomponent* restricted by individual license terms.

This document is part of the *Software Distribution Annex* which addresses the obligations deduced from the *Effective Licenses*. The software distribution is made available or transferred only in corresponding combination with the software distribution annex.

The component licenses and notice files are provided as part of the software distribution annex. Individual license texts may be omitted in case the terms are restricting the distribution.

License obligations of the individual components, as far as these can be addressed in documentation, are detailed in section .

2.1 metaeffekt GmbH Proprietary Components

Proprietary components included in the covered software distribution developed and supplied by metaeffekt GmbH are made available - if not explicitly marked otherwise - under contractually agreed terms.

2.2 Third-Party Proprietary Components

The covered software distribution contains proprietary third-party components. These are generally licensed individually under vendor-specific license terms, which further apply towards the licensee of Sample Product.

License and contract information regarding proprietary licenses are covered in section . License texts are included in the corresponding software distribution annex when permitted by the terms of the license and/or contract.

2.3 Open Source Components

In general, for each and every open source component the individual terms and conditions of the *associated license* apply. The licensee of an open source component is granted a non-exclusive right of use by the respective right holders restricted by the stipulated terms and conditions defined in the associated license. In particular, liability and warranty regulations of the individual open source license apply.

Specific liability and warranty definitions of Sample Product, if any, are subject to the contractual agreement under which the software distribution is made available. Specific liability definitions are unaffected by the terms of the individual open source licenses.

In case a license demands the provision of source code for a component, the source code is made available by adding source code artifacts to the software distribution annex or by making the source code available as individually outlined in the .

2.4 Public Domain Components

Public domain components have generally waived all property rights. Nevertheless, public domain components are associated with terms that need to be addressed in compliance.

2.5 Import / Export Information

This software distribution includes components, which are subject to export/import control. The country, the software distribution is supplied to, may have restrictions on the import, possession, and/or use of the software. Furthermore, the export or re-export of the software distribution to other countries may be restricted or even prohibited.

written permission of metaeffekt GmbH.
© 2025 metaeffekt GmbH - All rights reserved

Before using or re-exporting this distribution check the country specific laws, regulations and policies. For more information, see also http://www.wassenaar.org.

Please note that metaeffekt GmbH does not take any responsibility for the correctness, actuality, and content of the above external links.

3 Asset A - 1.0

This chapter contains the bill of materials and licensing information for the asset A 1.0.

3.1 Bill of Materials

In the subsequent chapters a comprehensive list of the components and artifacts covered by A 1.0 is provided. The chapters are organized by artifact type.

3.1.1 Web Modules

The following table lists all *web modules* included in the software covered by this document. The list is organized by components to group the web modules.

Component	Web Modules	Effective License(s)
@angular/common	`@angular/common-10.0.14`	Apache License 2.0 BSD Zero Clause License MIT License

3.1.2 Other Artifacts

The following table lists all other *artifacts* included in the software covered by this document. The list is organized by components to group the artifacts.

Component	Other Artifacts	Effective License(s)
Apache Commons Compress	*org.apache.commons / commons-compress* `commons-compress-1.18.jar`	Apache License 2.0 BSD 3-Clause License Public Domain

Apache Log4j	*org.apache.logging.log4j / log4j-api*
	`log4j-api-2.14.0.jar`
	
	org.apache.logging.log4j / log4j-core
	`log4j-core-2.14.0.jar`
		Apache License 2.0

Spring Framework	*org.springframework / spring-aop*
	`spring-aop-5.3.14.jar`
	
	org.springframework / spring-beans
	`spring-beans-5.3.14.jar`
	
	org.springframework / spring-context
	`spring-context-5.3.14.jar`
	
	org.springframework / spring-core
	`spring-core-5.3.14.jar`
	
	org.springframework / spring-expression
	`spring-expression-5.3.14.jar`
	
	org.springframework / spring-jcl
	`spring-jcl-5.3.14.jar`
		Apache License 2.0
		BSD 3-Clause License (copyright holder variant)

written permission of metaeffekt GmbH.
© 2025 metaeffekt GmbH - All rights reserved

3.2 Licensing

The license overview summarises all licenses evaluated for A. For each license the artefacts associated with this license are listed.

3.2.1 Licenses in Effect

This chapter outlines the different licenses considered effective within the given context. Table License Options (A) provides an outline of licenses options for the recipient of the software. In Licenses in Effect (A) provides an overview of the licenses in effect. In the following paragraphs the individual components are listed for each effective license.

A component may be subject to several licenses in effect. The individual parts of a license option are also listed as effective license.

Licenses	SPDX Id	OSI Status	Open CoDE Approval	Count
Apache License 2.0				4
BSD 3-Clause License				1
BSD 3-Clause License (copyright holder variant)				1
BSD Zero Clause License				1
MIT License				1
Public Domain				1

Table 3: Licenses in Effect (A)

3.2.2 License Usage

Licenses are used by several or individual components. In the following the components are listed for each effective license.

Apache License 2.0

The following table lists all components that are licensed or contain subcomponents under Apache License 2.0. Information with respect to the license or contract can be found in Apache License 2.0 [external].

Component	Other Artifacts / Packages / Web Modules	Version
@angular/common	`@angular/common-10.0.14`	`10.0.14`
Apache Commons Compress	*org.apache.commons / commons-compress* `commons-compress-1.18.jar`	`1.18`
Apache Log4j	*org.apache.logging.log4j / log4j-api* `log4j-api-2.14.0.jar`	`2.14.0`
Apache Log4j	*org.apache.logging.log4j / log4j-core* `log4j-core-2.14.0.jar`	`2.14.0`
Spring Framework	*org.springframework / spring-aop* `spring-aop-5.3.14.jar`	`5.3.14`
Spring Framework	*org.springframework / spring-beans* `spring-beans-5.3.14.jar`	`5.3.14`
Spring Framework	*org.springframework / spring-context*	`5.3.14`

4 Open CoDE allows a derivative approval in cases of license similarity. See https://opencode.de/en/knowledge/general-conditions/standardised-open-source-licenses Notes on license similarity, item LÄ.4.
5 This OpenCoDe approval represents the approval of multiple single licenses, which are represented under a single license term. The OpenCoDE approval for each single license is listed in the detailed overview of the linked license in this row.

4 Asset B - 2.0

This chapter contains the bill of materials and licensing information for the asset B 2.0.

4.1 Bill of Materials

In the subsequent chapters a comprehensive list of the components and artifacts covered by B 2.0 is provided. The chapters are organized by artifact type.

4.1.1 Other Artifacts

The following table lists all other *Artifact* included in the software covered by this document. The list is organized by components to group the artifacts.

Component	Other Artifacts	Effective License(s)
Apache HTTP Components Client	*org.apache.httpcomponents / httpclient* `httpclient-4.5.13.jar`	Apache License 2.0 Mozilla Public License 2.0
Apache HTTP Components	*org.apache.httpcomponents / httpcore* `httpcore-4.4.13.jar`	Apache License 2.0
SLF4J JCL	*org.slf4j / jcl-over-slf4j* `jcl-over-slf4j-1.7.36.jar`	Apache License 2.0
SLF4J	*org.slf4j / slf4j-api* `slf4j-api-1.7.36.jar`	MIT License

4.2 Licensing

The license overview summarises all licenses evaluated for B. For each license the artefacts associated with this license are listed.

4.2.1 Licenses in Effect

This chapter outlines the different licenses considered effective within the given context. Table License Options (B) provides an outline of licenses options for the recipient of the software. In Licenses in Effect (B) provides an overview of the licenses in effect. In the following paragraphs the individual components are listed for each effective license.

A component may be subject to several licenses in effect. The individual parts of a license option are also listed as effective license.

Licenses	SPDX Id	OSI Status	Open CoDE Approval	Count
Apache License 2.0				3
MIT License				1

6 Open CoDE allows a derivative approval in cases of license similarity. See https://opencode.de/en/knowledge/general-conditions/standardised-open-source-licenses Notes on license similarity, item LÄ.4.
7 This OpenCoDe approval represents the approval of multiple single licenses, which are represented under a single license term. The OpenCoDE approval for each single license is listed in the detailed overview of the linked license in this row.

5 Asset C - 3.0

This chapter contains the bill of materials and licensing information for the asset C 3.0.

5.1 Bill of Materials

In the subsequent chapters a comprehensive list of the components and artifacts covered by C 3.0 is provided. The chapters are organized by artifact type.

5.1.1 Other Artifacts

The following table lists all other *Artifact* included in the software covered by this document. The list is organized by components to group the artifacts.

Component	Other Artifacts	Effective License(s)
Apache Commons Codec	*commons-codec / commons-codec* `commons-codec-1.15.jar`	Apache License 2.0 BSD alike Public Domain
Apache Commons Collections	*org.apache.commons / commons-collections4* `commons-collections4-4.1.jar`	Apache License 2.0
Apache Commons IO	*commons-io / commons-io* `commons-io-2.7.jar`	Apache License 2.0

Apache Commons Lang	*commons-lang / commons-lang*
	`commons-lang-2.4.jar`
	
	org.apache.commons / commons-lang3
	`commons-lang3-3.6.jar`
		Apache License 2.0

5.2 Licensing

The license overview summarises all licenses evaluated for C. For each license the artefacts associated with this license are listed.

5.2.1 Licenses in Effect

This chapter outlines the different licenses considered effective within the given context. Table License Options (C) provides an outline of licenses options for the recipient of the software. In Licenses in Effect (C) provides an overview of the licenses in effect. In the following paragraphs the individual components are listed for each effective license.

A component may be subject to several licenses in effect. The individual parts of a license option are also listed as effective license.

Licenses	SPDX Id	OSI Status	Open CoDE Approval	Count
Apache License 2.0				5

8 Open CoDE allows a derivative approval in cases of license similarity. See https://opencode.de/en/knowledge/general-conditions/standardised-open-source-licenses Notes on license similarity, item LÄ.4.

9 This OpenCoDe approval represents the approval of multiple single licenses, which are represented under a single license term. The OpenCoDE approval for each single license is listed in the detailed overview of the linked license in this row.

Licenses	SPDX Id	OSI Status	Open CoDE Approval	Count
BSD alike				1
Public Domain				1

Table 30: Licenses in Effect (C)

5.2.2 License Usage

Licenses are used by several or individual components. In the following the components are listed for each effective license.

Apache License 2.0

The following table lists all components that are licensed or contain subcomponents under Apache License 2.0. Information with respect to the license or contract can be found in Apache License 2.0 [external].

Component	Other Artifacts / Packages / Web Modules	Version
Apache Commons Codec	*commons-codec / commons-codec* `commons-codec-1.15.jar`	`1.15`
Apache Commons Collections	*org.apache.commons / commons-collections4* `commons-collections4-4.1.jar`	`4.1`
Apache Commons IO	*commons-io / commons-io* `commons-io-2.7.jar`	`2.7`
Apache Commons Lang	*commons-lang / commons-lang* `commons-lang-2.4.jar`	`2.4`
Apache Commons Lang	*org.apache.commons / commons-lang3* `commons-lang3-3.6.jar`	`3.6`

Table 31: Components under Apache License 2.0 (C)

BSD alike

The following table lists all components that are licensed or contain subcomponents under BSD alike. Information with respect to the license or contract can be found in BSD alike [external].

Component	Other Artifacts / Packages / Web Modules	Version
Apache Commons Codec	*commons-codec / commons-codec* `commons-codec-1.15.jar`	`1.15`

Table 32: Components under BSD alike (C)

Public Domain

The following table lists all components that are licensed or contain subcomponents under Public Domain. Information with respect to the license or contract can be found in Public Domain [external].

Component	Other Artifacts / Packages / Web Modules	Version
Apache Commons Codec	*commons-codec / commons-codec* `commons-codec-1.15.jar`	`1.15`

Glossary

Artifact

Hard- and software assets consist of different constituents. These constituents are identified and determined based on various properties and representations. The term artifact is used as generalized term for the identification and tracking of these constituents. Artifacts are:

- individual files identified in the file system
- installed software consisting of several files and folders
- software packages or archives which are can be obtained from a package manager a repository or registry
- complete images of virtual machines, storage media or storage units
- identified devices or parts (logical, software-defined or physical)

Artifacts have different properties depending on their kind (hardware/software) and representation, which are used for identification and differentiation. Artifacts are classified and documented here according to defined artifact types.

See also: *Component*

Associated Licenses

A component and its parts can be made available by a provider under different licenses. This enables licensing depending on the context of use or the distribution channels in which the component is provided or transferred. These licenses are assigned to the component at the time of purchase and are referred to here as associated licenses.

In contrast to associated licenses, effective licenses are the licenses under which a component is transferred. The associated and effective licenses of a component may differ. The derivation of the effective licenses is limited by the terms of the associated licenses and their options.

See also: *providers*, *Effective Licenses*, *license identifiers and terms*

Component

A component is a group of one or more artifacts.

A component can be regarded as logical aggregate. License information is assigned at the component level and is consistent within aggregated artifacts.

A hardware component groups devices or parts.

See also: *Artifact*, *Subcomponent*

In common usage, the term component has a different connotation. In the context of software design or software architecture, the term "component" is understood as a self-contained building block that is integrated into a system. In an actual implementation, however, a system-specific manifestation or a component is used only in parts. Therefore, the term "component" is used here only to group the actual constituents (artifacts).

Sell also: *Artifact*

Effective Licenses

There are several cases where a component is made available by a provider under multiple associated licenses. The effective licenses are the selected licenses relevant for the software distribution:

- A component is provided with a licensing option (dual or multiple licensing), where either one or the other license can be used for software distribution. In this case, a single effective license must be specified.
- A component is licensed in a specific or higher version of the license. In this case, one version of the license must be designated as the effective license.
- For a component containing subcomponents, the respective licenses of the subcomponents shall be considered bound in addition to the license of the component.

written permission of metaeffekt GmbH.
© 2025 metaeffekt GmbH - All rights reserved

- An associated license of a component allows to sublicensing under another license. In this case, the selected license is the effective license.

See also: *Associated Licenses*, *License identifiers and terms*

License identifiers and terms
The license designators used were derived from the licenses (title, version and content) according to standardized rules, as far as possible and reasonable. The objective of standardizations was pursued and abbreviations were largely avoided.

A special feature are licenses or terms of use that do not bear any title or name. For these terms of use, the identifier was derived from content and context. In particular, simple *permissions*, which are common in many variations, are referred to here as "Permission Terms". In order to be able to classify and distinguish them more quickly, selected properties have been included in the license identifier (e.g. “Permission Terms (no warranty; no advertisment)”).

License information for components which are assignet to multiple licenses, which offer a choice or are provided with an exception, are presented in the form of an expression:

- License identifiers or in turn license expressions separated by a comma (,), correspond to the conjunction with an *AND*.
- Licenses or license expressions, that are linked with an *OR* or *EITHER OR*, are represented with a plus (+).
- *AND* has priority over *OR*. A bracket replacement is only used if it is absolutely necessary for the correct representation.

If you assign the license expression *Apache License 2.0, GNU General Public License 2.0 + GNU Lesser General Public License 2.1* to a component, this means that the “Apache License 2.0” AND one of the two GNU licenses applies. When interpreting the OR, the license notes must be explicitly checked.

License assignments may have extensions or exceptions. These are represented by additions to the license identifiers. For example *GNU Lesser General Public License 2.1 (or any later version)* or *GNU General Public License 2.0 (with classpath exception)*.

See also: *Associated Licenses*, *Effective Licenses*

Provider
A software provider can be the manufacturer itself or a software distributor. In most cases, the offered software is a mixed form. This means that the manufacturer's own and third-party components are combined. In the context of a supply chain for software, the provider and the recipient represent a link in this chain. A provider, who produces software on the basis of third-party content and uses it to implement projects or products (*provider*), is also a recipient in the supply chain and is dependent on supplies from other providers (*supplier*).

See also: *recipients*, *Software Distribution*

Recipient
The recipient of a software usually has a conctractual relationship with the provider. This conctractual relationship may also include the software distributor of third-party components.

Depending on the contractual relationship, the recipient may further develop, operate and/or be the end user of the software.

See also: *Provider*, *Software Distribution*

Software Distribution
A software distribution is composed of components and complementary data and configurations. A Software Distribution is put together by a provider in order to make the software available to one or more recipients. Depending upon context and relationship between provider and recipient of a software distribution, the license conditions of the contained components must be considered. A Software Distribution can take different characteristics. A software distribution can be converted for instance by an executable file, an archive or a file system image.

See also: *Provider*, *Recipient*

Software Distribution Annex
The Software Distribution Annex summarizes all information necessary to present the terms of use and to fulfill the obligations in providing or transferring the Software Distribution. The Annex includes the following elements:

- The associated and effective licenses and notices of each included component.

written permission of metaeffekt GmbH.
© 2025 metaeffekt GmbH - All rights reserved

- The source code of the components if specified for the software distribution in accordance with the effective license.
- A documentation of all third-party components (Bill of Materials) with supplemental license information and notices.

Depending on the use case and contractual framework conditions, further aspects may be included in the Software Distribution Annex. These include notes on import and export, the assessment of vulnerabilities of the software components or supplementary patent information.

Subcomponent
A subcomponent is a component that is embedded in or linked by another component.

See also: *Component*

Web Module

A web module usually contains a set of resources and scripts that implement a specific function of a web-based user interface.
